TABLE OF CONTENTS

1. OUTLINE

This specification provides a description for the TEAC FD-235HG, triple density (2/1.6/1MB, 3-mode), 90mm (3.5-inch) micro floppy disk drive (hereinafter referred to as FDD). Table 1-1 shows the outline of the FDD, and Table 1-2 shows the signal interface pin-assignment.

(Table 1-1) Specification outline

Model name	FD-235HG-C805	FD-235HG-C817	FD-235HG-C897
Front bezel	Black	Black	Beige (PS)
Eject button	Black	Black	Beige (PS)
LED indicator	Green	Red	Green
Safety standard	UL, CSA & TÜV (FD-235HG-C817 is not confirmed by TÜV.)		
Operation modes	2MB mode Write and read	1.6MB mode Write and read	1MB mode Write and read
90mm (3.5-inch) disk used	High density (2HD)	High density (2HD)	Normal density (2DD)
Unformatted data capacity	2M bytes	1.6M bytes	1M bytes
Data transfer rate	500k bits/s	500k bits/s	250k bits/s
Disk rotational speed	300rpm	360rpm	300rpm
Track density	5.3track/mm (135tpi)		
Track to track time	3ms		
Required power	+5V single (4.5 ~ 5.5V)		
Signal output driver	Open collector TTL		
Input signal pull-up	1kΩ ±5%, unremovable		
Customer selectable strap	6 selections (DS0, DS1, RY34, DC34, HA, FG) Refer to item. 11.1		

Function setting at delivery	1. Strap setting
	 1.1 DS0 : DRIVE SELECT 0 on pin 10
	 1.2 RY34 : READY on pin 34
	 1.3 HA : Automatic density setting for 2DD (1MB) disk or 2HD
	                 (2MB/1.6MB) disk.
	 1.4 FG : Frame is electrically shorted to DC 0V.
	2. Other interface setting
	 2.1 Pin2 : MODE SELECT input (LOW: 1.6MB mode)
	 3. Other function setting
	 3.1 LED turn on condition: DRIVE SELECT
	 3.2 Motor rotating condition: MOTOR ON
	 3.3 Ready and seek-complete gate (full-mask) for INDEX and
	      READ DATA output pulses.
	 3.4 Auto-chucking at disk installation
	 3.5 Equipped with auto recalibration		

Interface connector	34 pin right-angled header connector		
Power connector	Equipped		
Other optional function	Not equipped		

(Table 1-2) Signal interface pin-assignment

Pin Nos.	Signals	Pin Nos.	Signals	Direc
1	0V	2	MODE SELECT	Input
3	0V	4	NC	—
5	0V	6	NC	—
7	0V	8	INDEX	Output
9	0V	10	DRIVE SELECT 0/OPEN	Input
11	0V	12	DRIVE SELECT 1/OPEN	Input
13	0V	14	NC	—
15	0V	16	MOTOR ON	Input
17	0V	18	DIRECTION SELECT	Input
19	0V	20	STEP	Input
21	0V	22	WRITE DATA	Input
23	0V	24	WRITE GATE	Input
25	0V	26	TRACK 00	Output
27	0V	28	WRITE PROTECT	Output
29	0V	30	READ DATA	Output
31	0V	32	SIDE ONE SELECT	Input
33	0V	34	DISK CHANGE/READY	Output

The FDD is equipped with a discrimination switch for the high density (HD) hole of an installed disk cartridge. Refer to item. 8.3.13 as to the detailed explanation for density mode setting.

2. DISK

  (1) Work disk

     90mm (3.5-inch) micro floppy disks which are mutually agreed between the customer and TEAC.

     For 2MB mode   :   High density disk (2HD)

         1.6MB mode :   High density disk (2HD)

         1MB mode   :   Normal density disk (2DD)

  (2) Cleaning disk

     The FDD does not require any cleaning disk. However, the dry type disk which is mutually agreed between the customer and TEAC is used when requiring a cleaning disk.

3. PHYSICAL SPECIFICATION

(Table 3-1) Physical specification

Width	101.6mm (4.00 in), Nom.
Height	25.4mm (1.00 in), Nom.
Depth	145mm (5.71 in), Nom., excluding front bezel
Weight	410g (0.90lbs), Nom., 415g (0.91 lbs), Max.
External view	See Fig. 3-1.
Cooling	Natural air cooling
Mounting	Mountings for the following directions are acceptable. (a) Front loading, mounted vertically. (b) Front loading, mounted horizontally with spindle motor down. (c) Mounting angle in items (a) and (b) should be less than 25° with front bezel up or down. Note: As to the other mounting directions than the above will be considered separately.
Installation	With installation holes on the frame of the FDD. Refer to Fig. 3-1.
Material of frame	Sheet Metal.
Material of front bezel	PPHOX (Complying with UL94-5V) ABS

(Fig. 3-1) FDD external view

4. OPERATIONAL CHARACTERISTICS

4.1 2MB Mode Data Capacity

(Table 4.1-1) 2MB mode data capacity

Recording method			FM	MFM
Data transfer rate		k bits/s	250	500
Tracks/disk			160	160
Innermost track bit density		bpmm	343.19	686.38
Innermost track flux density		fcpmm	686.38	686.38
Data capacity	Unformatted	k bytes/track	6.25	12.5
		k bytes/disk	1,000	2,000
	Formatted — 32 sectors/track	k bytes/sector	0.128	0.256
		k bytes/track	4.096	8.192
		k bytes/disk	655.36	1,310.72
	Formatted — 18 sectors/track	k bytes/sector	0.256	0.512
		k bytes/track	4.608	9.216
		k bytes/disk	737.28	1,474.56
	Formatted — 10 sectors/track	k bytes/sector	0.512	1.024
		k bytes/track	5.12	10.24
		k bytes/disk	819.2	1,638.4

4.2 1.6MB Mode Data Capacity

(Table 4.2-1) 1.6MB mode data capacity

Recording method				FM	MFM
Data transfer rate			k bits/s	250	500
Tracks/disk				160	160
Innermost track bit density			bpmm	285.98	571.97
Innermost track flux density			fcpmm	571.97	571.97
Data capacity	Unformatted		k bytes/track	5.208	10.416
			k bytes/disk	833.28	1,666.56
	Formatted	26 sectors/track	k bytes/sector	0.128	0.256
			k bytes/track	3.328	6.656
			k bytes/disk	532.48	1,064.96
		15 sectors/track	k bytes/sector	0.256	0.512
			k bytes/track	3.84	7.68
			k bytes/disk	614.4	1,228.8
		8 sectors/track	k bytes/sector	0.512	1.024
			k bytes/track	4.096	8.192
			k bytes/disk	655.36	1,310.72

4.3 1MB Mode Data Capacity

(Table 4.3-1) 1MB mode data capacity

Recording method			FM	MFM
Data transfer rate		k bits/s	125	250
Tracks/disk			160	160
Innermost track bit density		bpmm	171.61	343.19
Innermost track flux density		fcpmm	343.19	343.19
Data capacity	Unformatted	k bytes/track	3.125	6.25
		k bytes/disk	500	1,000
	Formatted — 16 sectors/track	k bytes/sector	0.128	0.256
		k bytes/trac	2.048	4.096
		k bytes/disk	327.68	655.36
	Formatted — 9 sectors/track	k bytes/sector	0.256	0.512
		k bytes/track	2.304	4.608
		k bytes/disk	368.64	737.28
	Formatted — 5 sectors/track	k bytes/sector	0.512	1.024
		k bytes/track	2.56	5.12
		k bytes/disk	409.6	819.2

4.4 Disk Rotation Mechanism

(Table 4.4-1) Disk Rotation Mechanism

Spindle motor		DC brushless motor
Spindle speed	2MB/1MB mode	300rpm
	1.6MB mode	360rpm
Motor servo method		Frequency servo by ceramic oscillator
Motor/spindle connection		Motor shaft direct
Disk speed		The same as the spindle speed.
Long term speed variation (LSV)		±1.5% or less
Instantaneous speed variation (ISV)		±2% or less
Start time		480ms or less
Average latency	2MB/1MB mode	100ms
	1.6MB mode	83.3ms
Speed change time		480ms or less (300rpm ↔ 360rpm)
Ready waiting time		505ms or less for motor on

4.5 Index Detection

(Table 4.5-1) Index Detection

Number of index		1 per disk revolution
Detection method		Rotor detection of spindle motor by Hall element or FG output.
Detection cycle	2MB/1MB mode	200ms ±1.5%
	1.6MB mode	166.7ms ± 1.5%
Index burst detecttion timing error (with specified test disk)	300rpm	±400μs or less
	360rpm	±340μs or less

4.6 Track Construction

(Table 4.6-1) Track Construction

Track density	5.3 tracks/mm (135tpi)
	Track pitch 187.5μm
Number of cylinders	80 cylinders
Number of tracks	160 tracks/disk
Outermost track radius (track 00)	Side 0 39.500mm (1.5551 in)
	Side 1 38.000mm (1.4961 in)
Innermost track radius (track 79)	Side 0 24.6875mm (0.9719 in)
	Side 1 23.1875mm (0.9129 in)
Positioning accuracy	±15μm or less, with specified test disk (Track 40, 23 ± 2°C, 45 ~ 55%RH, horizontal)

4.7 Magnetic Head

(Table 4.7-1) Magnetic Head

Magnetic head	Read/write head with erase gap, 2 sets
Effective track width after trim erase	0.115 ± 0.008mm (0.0045 ± 0.0003 in)
Read/write gap azimuth error	0° ± 18', with specified test disk

4.8 Track Seek Mechanism

(Table 4.8-1) Track Seek Mechanism

Head position mechanism	Stepping motor and lead screw
Stepping motor	4-phase, 20 steps per revolution
Stepping motor drive	2 steps per track
Track 00 detection method	Photo-interrupter
Track to track time	3ms (excludes settling time, refer to item. 8.3.4)
Settling time	15ms or less (excludes track to track time)
Average track seek time	94ms (includes settling time)

4.9 Window Margin and Others

(Table 4.9-1) Window Margin and Others

Window Margin (with specified test disk, MFM method , PLL separator)		
	2MB/1.6MB mode	300ns or more
	1MB mode	600ns or more
Recommendable write pre-compensation		
	2MB mode	±125ns
	1.6MB/1MB mode	0 ~ ±125ns
Head load mechanism		Not equipped (The FDD becomes head load condition whenever a disk is installed.)
File protect mechanism		Detection of write inhibit hole by switch
Disk detection mechanism		Detection of disk installation by switch
Disk inserting force		6.86N (700g) or less at the center of disk
Disk ejecting force		13.73N (1400g) or less
Acoustic noise at 50cm		50dBA or less at 3ms or 4ms seek operation
Disk type descriminating mechanism		Detection of HD hole by switch

5. ENVIRONMENTAL CONDITIONS

(Table 5-1) Environmental Condition

	Operating	Storage	Transportation
Ambient temperature	4 ~ 51.7°C (39 ~ 125°F)	–22~60°C (–8 ~ 140°F)	–40 ~ 65°C (–40 ~ 149°F)
Temperature gradient	20°C (36°F) or less per hour	30°C (54°F) or less per hour	30°C (54°F) or less per hour
Relative humidity	20 ~ 80% (no condensation) Max. wet bulb temperature shall be 29.4°C (85°F)	5 ~ 90% (no condensation) Max. wet bulb temperature shall be 40°C (104°F)	5 ~ 95% (no condensation) Max. wet bulb temperature shall be 45°C (113°F)
Vibration	14.7m/s^2 (1.5G)I or less (10 ~ 100Hz, 1 octave/ min sweep rate) 9.8m/s^2 (1.0G) or less (100 ~ 200Hz, 1 octave/ min sweep rate) 4.9m/s^2 (0.5G) or less (200 ~ 600Hz, 1 octave/ min sweep rate)	——	19.6m/s^2 (2G) or less (10 ~ 100Hz, 1/4 octave/ min sweep rate)
Shock	Write & read: 49m/s^2 (5G)(11ms, 1/2 sine wave) or less Read only: 98m/s^2 (10G)(11ms, 1/2 sine wave) or less	—— ——	686m/s^2 (70G) (11ms, 1/2 sine wave) or less
Altitude	–300m (–980feet) ~ 5,000m (16,400feet)	——	
	Notes: The above requirements are applied for the FDD without shipping box. When a long period is required for transportation such as by ship, storage environmental conditions should be applied.(JIS-Z0200)		

6. RELIABILITY

(Table 6-1) Reliability

MTTF		30,000 power on hours or more (for typical operation duty)
MTTR		When failure, the FDD should be replaced in unit of the drive and not repaired in unit of parts or assemplies.
Design component life		5 years
Disk life		3×10^6 passes/track or more
Disk insertion		1.5×10^4 times or more
Seek operation		1×10^7 random seeks or more
Preventive maintenance		Not required (for typical operation duty)
Error rate	Soft error	1 or less per 10^9 bits read A soft (recoverable) error means that it can be recoverred correcty within three retries.
	Hard error	1 or less per 10^{12} bits read A hard (unrecoverable) error means that it cannot be recovered correstly within three retries. However, it is recommended to be followed by a recalibration to track 00 and four additional retries.
	Seek error	1 or less per 10^6 seeks A seek error means that it can seek to a target track within one retry including a recalibration to track 00.
Safety standard		Approved by UL, CSA and TÜV (FD-235HG-C817 is not confirmed by TÜV.)
Electro-static dischange test		15kV (150pF, 330Ω) No hard error and/or no component damage occur when the test is applied to the operator access area (front bezel area).

7. POWER INTERFACE

7.1 Required Power

The following specifications are applied at interface connector of the FDD.

(1) DC +12V : Not required

(2) DC +5V

(a) Voltage tolerance :±10% (4.5 ~ 5.5V)

(b) Allowable ripple voltage :100mVp-p or less (including spike noise)

(c) Current and power consumption

(Table 7.1-1) Current and power consumption

Operating mode		Average current		Average power	
		Typ.	Max.	Typ.	Max.
Stand-by		8mA	10mA	40mW	55mW
Read operation		0.30A	0.40A	1.50W	2.20W
Write operation		0.30A	0.40A	1.50W	2.20W
Seek operation	3ms	0.56A	0.66A	2.80W	3.63W
	6ms	0.60A	0.70A	3.30W	4.18W
Seek operation peak		0.9A	1.0A	4.50W	5.50W
Spindle motor start		0.62A	0.70A	3.10W	3.85W

Notes:
1. Values of Typ. current and power are specified at 5.0V, while the values of Max. are at 5.5V (+10%) with a disk of large running torque.
2. Stand-by mode is defined at the stop condition of spindle motor and seek operation.
3. Seek operation peak means the operation during the settling (15ms) after the seek conpletion.
4. Rush current flows within 150ms after the motor start.
5. Short time peak current except for power-on surge is less than 1.0A.
6. Refer to item. 9.4 as to the current consumption profile.

## 7.2 Power Interface Connector and Cable

(1) Power interface connector

(Table 7.2-1) Power interface connector

FDD side connector	I-PEX P/N 5201-003-0046F or equivalent
Pin numbers	4 pins
Protection method for mis-connection	Mechanical protection by the shape of connector housing
Connector external view	See Fig. 7.2-1.
Connector location	See Fig. 3-1.
Power interface connections	See Table 7.2-2.
Cable side matched connector	AMP P/N 171822-4 (natural color) or equivalent
Cable side matched pin	AMP P/N 170204-2 (AWG#20 ~ 26, loose piece) or P/N 170262-2 (AWG#20 ~ 26, strip form) or equivalent

(2) Power interface cable: Any appropriate cables taking the maximum power consumption of the FDD will be acceptable.

(Table 7.2-2) Power interface pin-assignment

Power voltage	Pin numbers
DC +5V	1
0V	2
(0V)	3
(No conection)	4

8. SIGNAL INTERFACE

8.1 Signal Interface Connector and Cable

(1) Signal interface connector

(Table 8.1-1) Signal interface Connector

FDD side connector	I-PEX P/N 5003-001-0346F or equivalent
Pin numbers and pin pitch	2.54mm (0.1 in) pitch, 34-pin block header (17-pin double rows, even number pins are upper side of the FDD).
Connector external view	See Fig. 8.1-1.
Connector location	See Fig. 3-1.
Cable side matched connector	FUJITSU, P/N FCN-747B034-AU/B (closed end) or -AU/O (daisy chain) or equivalent.

Note: It is recommended to use a polarizing type connector with a projection on the center of the housing to avoid mis-connection. Refer to Fig. 8.1-1.
For such a polarizing connector, ∇mark of the connector housing may show pin No.34.

(2) Signal interface cable Maximum cable length : 2m, by terminator of 1kΩ or less (For daisy chain connection, the total cable length should be less than 2m).

The longer the cable, the smaller the resistor value should be.

8.2 Electrical Charactristics

"Vcc" means +5V power voltage supplied to the FDD.

8.2.1 FDD side receiver and driver

The specification are applicable at the interface connector of the FDD.

(Table 8.2.1-1) FDD side receiver and driver

Interface driver/reciver			See Fig. 8.2.2-1.
Electrical characteristics of receiver	Input signals (TTL level)	LOW level (TRUE)	0 ~ 0.7V
		LOW level input current	5.9mA, Max. (Including terminator current)
		HIGH level (FALSE)	2.2V ~ +5V power voltage
	Terminator resistor value		1kΩ ±5% Terminator (pull-up) resistor is connected to each input.
Electrical characteristics of driver	Output signals (Open collector driver)	LOW level (TRUE)	0 ~ 0.4V
		Driver sink current capability	37mA, Max.
		HIGH level (FALSE)	Depending on host side terminator

8.2.2 Host side receiver and driver

(Table 8.2.2-1) Host side receiver and driver

Host side driver	TTL, CMOS, etc.
Driver required sink current	FDD input current × Number of daisy chained FDD
Host side receiver	TTL, CMOS, etc. Terminator is required for each output signal line from the FDD.
Host side terminator resistor value	Usually 1 ~ 2.2kΩ is used. (150Ω Min.)
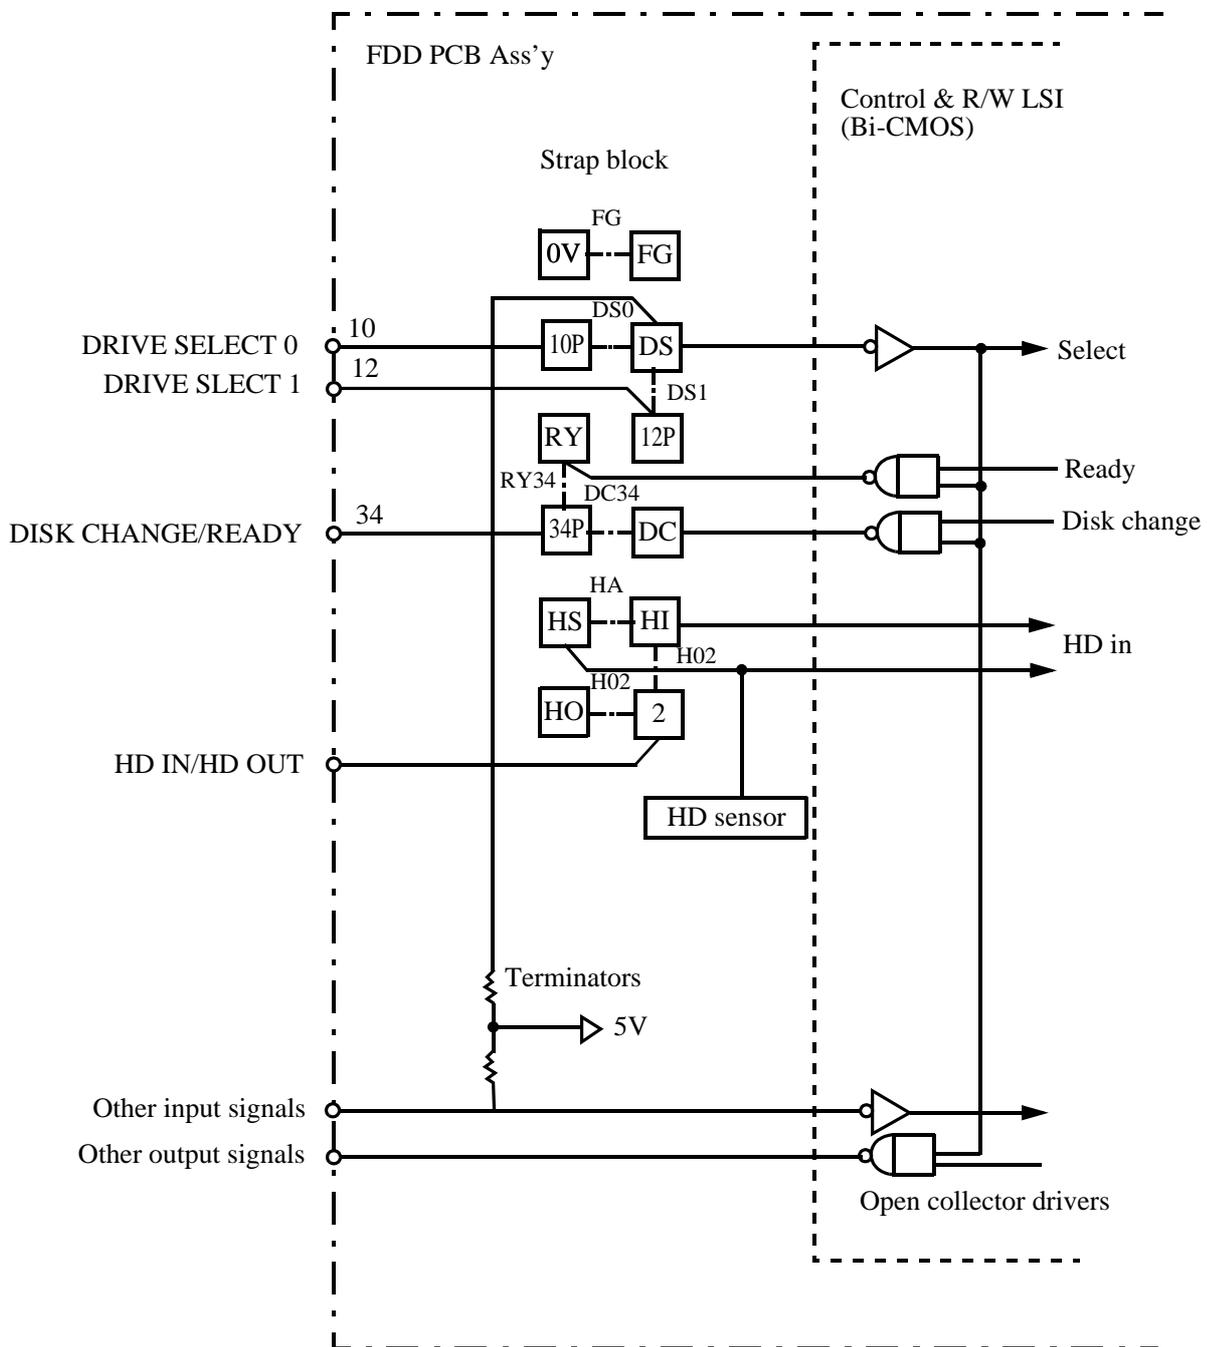

(Fig. 8.2.2-1)　FDD signal interface circuit

– 18 –

8.3 Input/Output Signals

In the following, input signals are those transmitted to the FDD while output signals are those transmitted from the FDD.

LOW level of the signals is TRUE unless otherwise specified.

Refer to Table 1-2 as to the signal needed in this specification.

8.3.1 DRIVE SELECT input signal

(1) Signal to select a specific FDD for operation in multiplex control.

(2) Only the DRIVE SELECT signal of the same number as of on-state strap is effective.

(3) All the input/output signals except for the MOTOR ON and MODE SELECT are valid after this signal is made TRUE. The time required to be valid is 0.5μsec, Max. including transmission delay time of the DRIVE SELECT signal through the interface cable.

(4) Refer to item. 12.1 as to the turn-on condition of the front bezel indicator.

(5) Refer to item. 11. and Table 1-2 as to the strap setting and the selection of signal function.

8.3.2 MOTOR ON input signal

(1) Level signal to rotate the spindle motor.

(2) The spindle motor reaches to the rated rotational speed (2MB/1MB mode: 300rpm, 1.6MB mode: 360rpm) within 480ms after this signal is made TRUE.

(3) The rotational speed switchable between 360rpm and 300rpm according to the MODE SELECT signal while a high density (2HD) disk is installed.

(4) Refer to item. 11.2 as to the rotational condition of the spindle motor.

8.3.3 DIRECTION SELECT input signal

(1) Level signal to define the moving direction of the head when the STEP line is pulsed.

(2) Step-out (moving away from the center of the disk) is defined as HIGH level of this signal. Conversely, step-in (moving toward the center of the disk) is defined as LOW level of this signal.

(3) The signal shall maintain its level for 0.8μs, Min. prior to the trailing edge of the STEP pulse. Refer to Fig. 9.2-1.

8.3.4 STEP input signal

(1) Negative pulse signal to move the head. The pulse width shall be 0.8μs or more and the head moves one track space per one pulse.

(2) The access motion (head seek operation) is initiated at the trailing edge of the STEP pulse and completes within 18ms after starting the access including the settling time.

(3) For the subsequent motion in the same direction, the STEP pulses should be input with the interval of 3ms or more, while the pulses should be input with the interval of 4ms or more for a direction change. Refer to Fig. 9.2-1.

STEP pulses less than 3ms interval for the same direction or less than 4ms interval for a direction change may cause seek error.

(4) STEP pulses are ignored and the access motion is not initiated when one of the following conditions is satisfied.

  (a) The WRITE PROTECT signal is FALSE and the WRITE GATE signal is TRUE.

  (b) The TRACK 00 signal is TRUE and the DIRECTION SELECT signal is HIGH level (step-out).

  (c) Step-in operation (DIRECTION SELECT signal is LOW level) from track 81.

8.3.5 WRITE GATE input signal

(1) Level signal to erase the written data and to enable the writing of new data.

(2) The FDD is set to write mode when the following logical expression is satisfied.

WRITE GATE * DRIVE SELECT * $\overline{\text{WRITE PROTECT}}$

(3) This signal shall be made TRUE after satisfying all of the following conditions.
  (a) 18ms has been passed after the effective receipt of the final STEP pulse.
  (b) 100μs has been passed after the level change of the SIDE ONE SELECT signal.
(4) The following operations should not be done at least 650μs after this signal is changed to FALSE.
  (a) Make the MOTOR ON signal FALSE.
  (b) Start the head seek operation by the STEP pulse.
  (c) Make the DRIVE SELECT signal FALSE.
  (d) Change the level of the SIDE ONE SELECT signal.
  (e) Change the level of the MODE SELECT signal.

8.3.6 WRITE DATA input signal

(1) Negative pulse signal to designate the contents of data to be written on a disk. The pulse width should be 0.1μs through 1.1μs and the leading edge of the pulse is used.
(2) WRITE DATA pulses are ignored while either of the following conditions is satisfied.
  (a) The WRITE GATE signal is FALSE.
  (b) The WRITE PROTECT signal is TRUE.
(3) This signal should be input according to the timing in Fig. 8.3-2.
   It is recommended to stop the input of the WRITE DATA pulses during the read operation in order to avoid harmful cross talk.

8.3.7 SIDE ONE SELECT input signal

(1) Level signal to designate which side of a double sided disk is used for reading or writing.
(2) When this signal is HIGH level, the magnetic head on the side 0 surface (lower side) of the disk is selected, while the magnetic head on the side 1 surface (upper side) is selected when this signal is LOW level.
(3) The READ DATA pulse on a selected surface is valid more than 100μs after the change of this signal level.
(4) Write operation (the WRITE GATE signal is TRUE) on a selected surface shall be started more than 100μs after the change of this signal level.

8.3.8 TRACK 00 output signal

(1) Level signal to indicate that the head is on track 00.
(2) This signal is valid more than 2.8ms, after the effective receipt of the STEP pulse.

8.3.9 INDEX output signal

(1) Negative pulse signal to indicate the start point of a track and one index pulse per one disk revolution is output.
(2) INDEX pulse is output when the following logical expression is satisfied.

Index detection * DRIVE SELECT * Ready state * Seek-complete

Notes: (a) Ready state:
  • The FDD is powered on.
  • A disk is installed.
  • Auto-chucking completed.
  • A motor-on command is TRUE and 505ms, approx. has been passed.
  • An INDEX pulse has been detected after motor-on command.

• 480ms approx, have been passed after the density mode is switched between 1.6MB (360rpm) and 2MB (300rpm) using the MODE SELECT input signal.
    (b) Seek-complete means the state that 15.8 ~ 17.9ms has been passed after the trailing edge of the final STEP pulse.
(3) Fig. 8.3-1 shows the timing of this signal. Leading edge of the pulse shall be used as the reference and pulse width is 1.5ms through 5ms.

8.3.10 READ DATA output signal

(1) Negative pulse signal for the read data from a disk composing clock bits and data bits together.
(2) Fig. 8.3-3 shows the timing of this signal. Pulse width is 0.15µs through 0.8µs and the leading edge of the pulse shall be used as the reference.
(3) READ DATA pulse is output when the following logical expression is satisfied.

Read data detection * DRIVE SELECT * $\overline{\text{Write operation}}$ * Ready state * Seek-complete

Notes: (a) Refer to item. 8.3.9 as to the ready state.
    (b) $\overline{\text{Write operation}}$ is the state while the WRITE GATE input signal is FALSE and erase delay time has been passed after the WRITE GATE signal changed to FALSE.
    (c) Refer to item. 8.3.9 as to the seek-complete.
(4) Output pulse is valid while all of the following conditions are satisfied.
  (a) 18ms has been passed after the effective receival of the final STEP pulse.
  (b) 100µs has been passed after the level change of the SIDE ONE SELECT signal.
  (c) 650µs (2MB mode) or 590µs (1.6MB mode) or 690µs (1MB mode) has been passed after the WRITE GATE signal is changed to FALSE.

8.3.11 WRITE PROTECT output signal

(1) Level signal to indicate that the write inhibit hole of an installed disk is open.
(2) When this signal is TRUE, data on the disk are protected from miserasing and write operation is inhibited.

8.3.12 DISK CHANGE output signal

(1) Level signal to indicate that a disk in the FDD is ejected.
(2) Refer to item. 11.as to the strap setting for this signal output.
(3) This signal changes to TRUE when either of the following conditions is satisfied.
  (a) Power on.
  (b) A disk is removed.
(4) The signal returns to FALSE when both of the following conditions are satisfied. Refer to Fig. 8.3-4.
  (a) A disk has been installed.
  (b) A STEP command is received when the DRIVE SELECT signal is TRUE.

8.3.13 READY output signal

(1) Level signal to indicate that the FDD is in ready state (refer to item. 8.3.9) for read and write operations.
(2) Refer to item. 11. as to the strap setting for this signal output.
(3) Required time for this signal to be TRUE after the start of the spindle motor is 505ms, Max.
(4) When a motor-on command is made FALSE, this signal is also changed to FALSE within 0.3ms.

8.3.14 Input/Output sgnal for density mode setting (MODE SELECT)

Every FDD model, there are any basic methods for setting the density mode of the FDD as shown in the following.

8.3.14.1 Method for switching the density mode between HIGH DENSITY and NORMAL DENSITY

(1) Interface signal is not used between the FDD and host-controller.
  Density mode of the FDD and host system are determined independently.
(2) Density mode of the FDD is automatically set by discriminating the HD hole of an installed disk. If the density mode of the FDD is not coincident with that of the host controller, data errors always occur at read operation.

8.3.14.2 Method for switching the density mode between 2MB mode and 1.6MB mode

The density mode of 2MB or 1.6MB is set by the MODE SELECT input signal from host controller.

(Table 8.3.14.2-1) Method of the MODE SELECT signal

| FDD density mode		1MB mode	1.6MB mode	2MB mode
Set by MODE SELECT signal	LOW: 1.6MB	Not related to MODE SELECT signal	LOW level	HIGH level
	HIGH: 1.6MB		HIGH level	LOW level

8.3.15 NO CONNECTION (NC)

The NC pins are electrically isolated from any other circuit in the FDD.

8.3.16 Treatment of not-used signals

If some of the provided input/output signals are not necessary for your application, keep the unused signal lines open or pull up by an appropriate resistor value (refer to item. 8.2.2) at the host side.
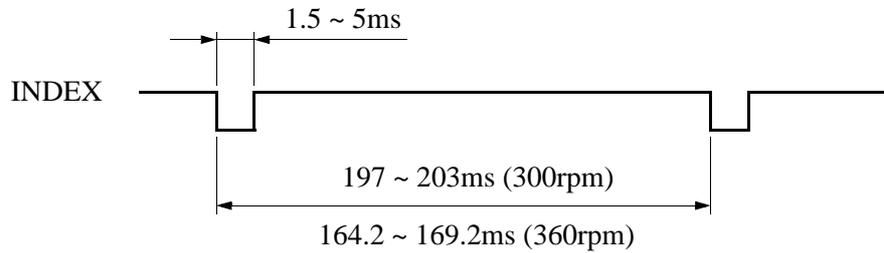

(Fig. 8.3-1)   INDEX timing

(Fig. 8.3-2)   WRITE DATA timing (MFM method)
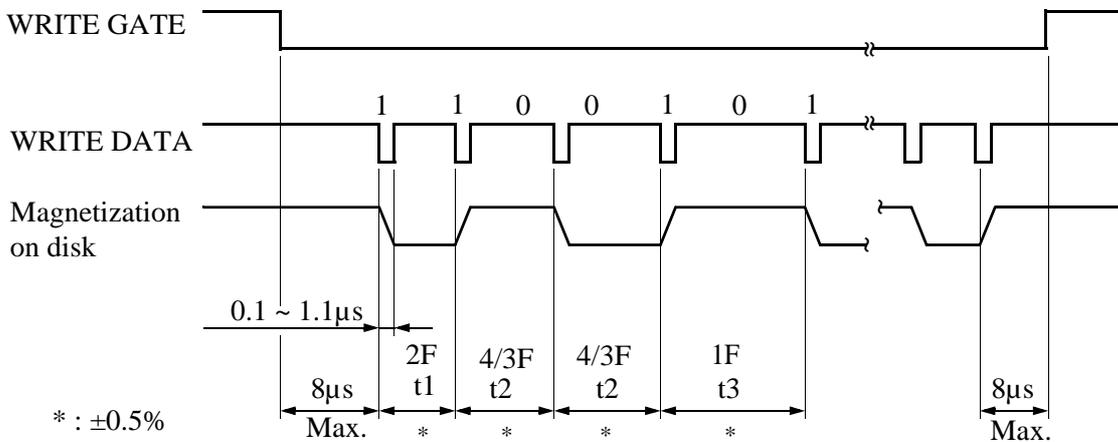

Density mode	rpm	t1	t2	t3
2MB mode	300	2μs, Nom.	3μs, Nom.	4μs, Nom.
1.6MB mode	360	2μs, Nom.	3μs, Nom.	4μs, Nom.
1MB mode	300	4μs, Nom.	6μs, Nom.	8μs, Nom.
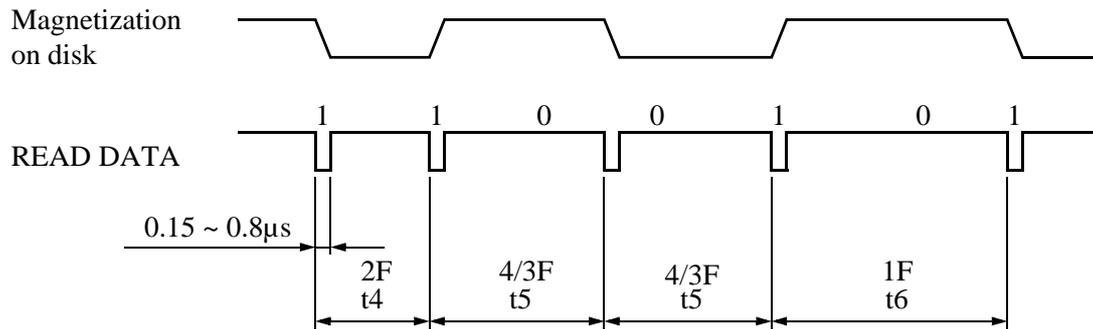

Density mode	rpm	t4	t5	t6	t7
2MB mode	300	2µs, Nom.	3µs, Nom.	4µs, Nom.	±350ns
1.6MB mode	360	2µs, Nom.	3µs, Nom.	4µs, Nom.	±350ns
1MB mode	300	4µs, Nom.	6µs, Nom.	8µs, Nom.	±700ns

**(Fig. 8.3-3)   READ DATA timing (MFM method)**
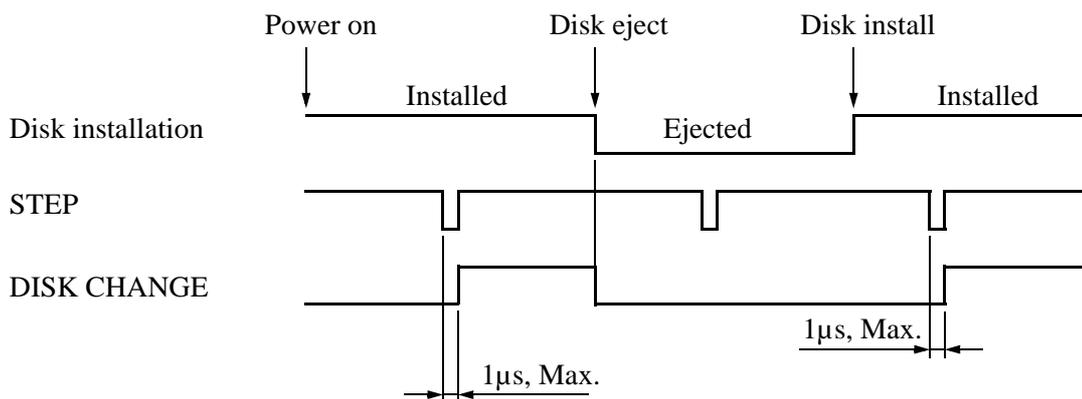

Note: To simplify the timing chart, the DRIVE SELECT signal is assumed always TRUE in the above figure.

(Fig. 8.3-4)   DISK CHANGE signal timing

9. CONTROL SEQUENCE

9.1 Power-on

(1) Protection against power on and off

   (a) In the transient period when the +5V power is lower than 3.5V, the FDD is protected against miswriting and miserasing whatever the state of input signals are.

   (b) Except for the condition of item (a), the FDD is protected against miswriting and miserasing as long as the WRITE GATE input signal does not change to TRUE.

(2) Power reset time in FDD :Less than 400ms, including auto-recalibration
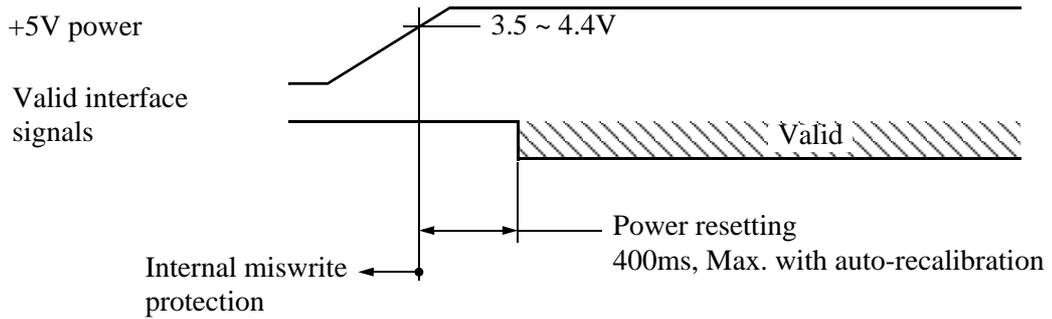

(Fig. 9.1-1) Power on sequence

9.2 Seek Operation

Seek operation can be done independently of the spindle motor rotation.

t1 ≥ 0.8μs   t2 ≥ 2μs   t3 ≥ 560μs (1.6MB mode) or 650μs (2MB/1MB mode)
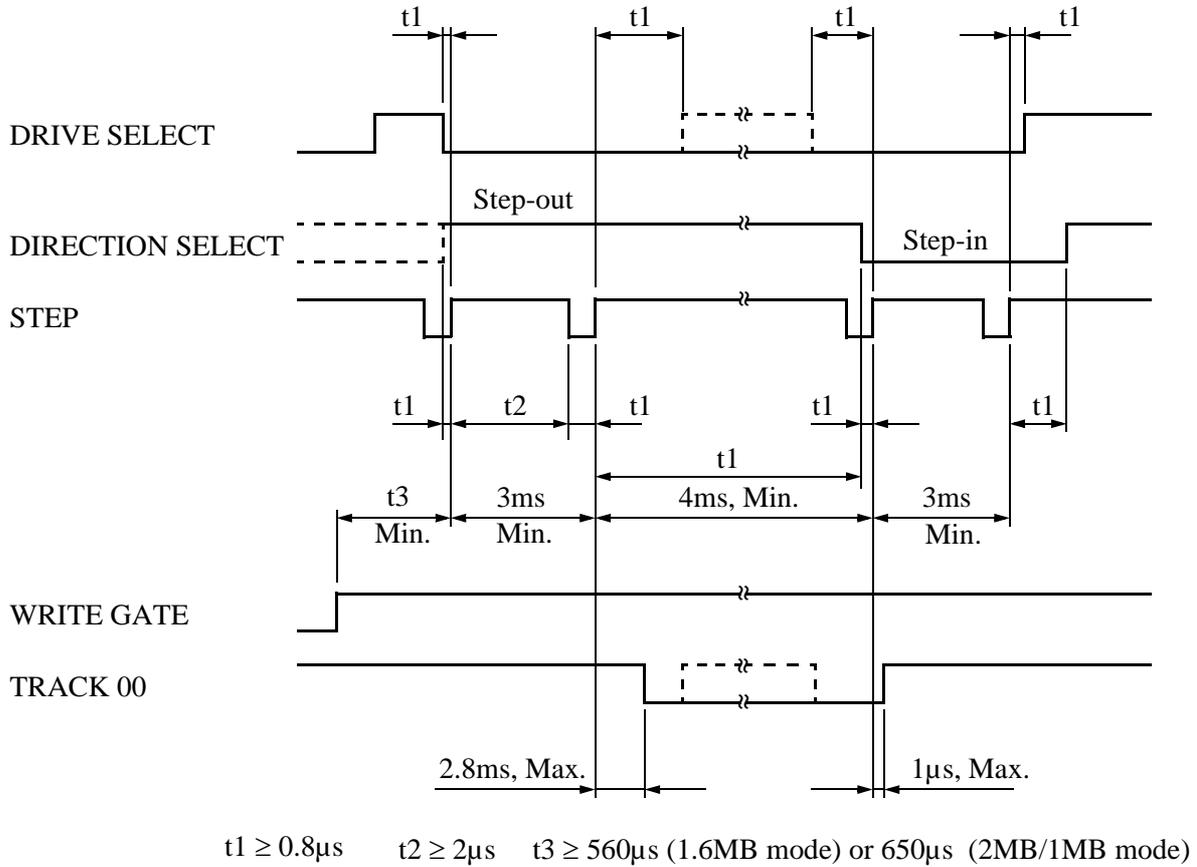

(Fig. 9.2-1)   Seek operation timing

(Fig. 9.3-1)   Read/Write operation timing

9.4 Current Consumption Profile
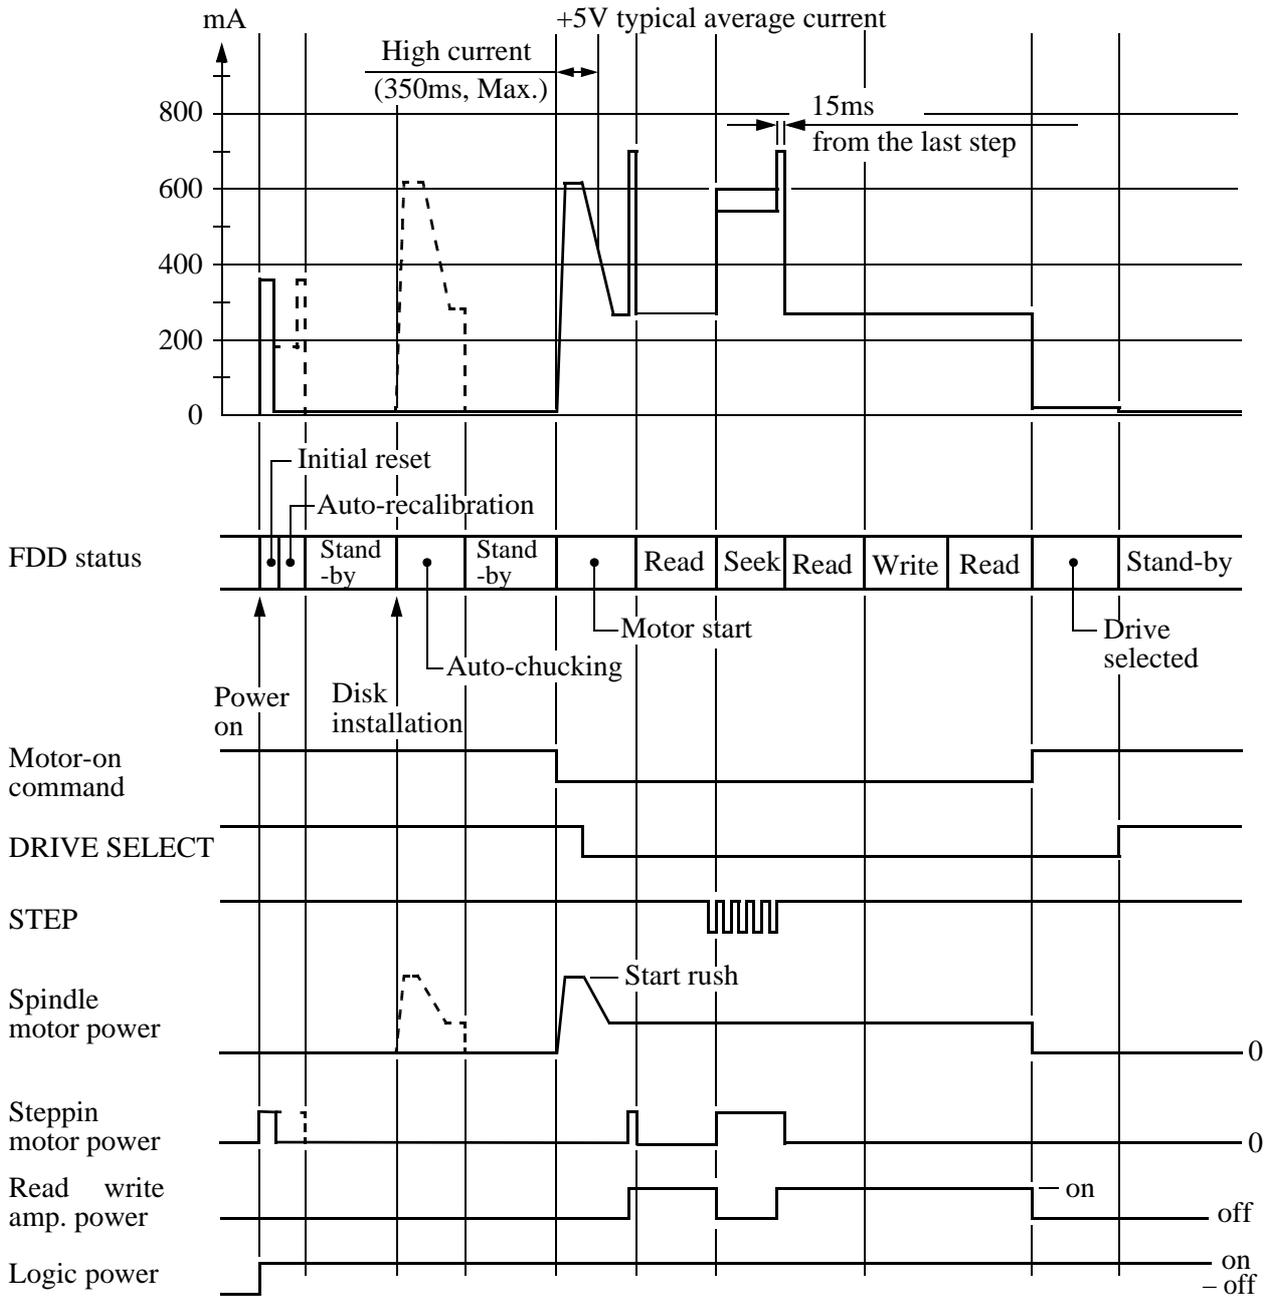

(Fig. 9.4-1)   Typical average current profile

(1) Stand-by mode

When both of the following conditions are satisfied, FDD goes to the stand-by mode (low power consumption mode).

  (a) The spindle motor stops.

  (b) Not in the seek operation (including the settling time).

  Note: In the stand-by mode, the FDD can immediately respond to a command from host controller with no restriction.

        If the polling operation of the DRIVE SELECT line is done in the stand-by mode, current flows intermittently and +5V current slightly increases.

(2) Simultaneous operation of motor start and seek

If a seek operation is done during the start-up of the spindle motor, or if the motor starts during the seek operation, +5V current at motor start increases by 0.55A, Max. from the value in Table 7.1-1.

Stepping motor is energized at high power from the first STEP to 15msec after the last STEP.

(3) +5V current increases for 15ms after a lapse of 500ms by engergizing of the motor.

10. FRAME GROUNDING

(1) The FDD frame is electrically connected to DC 0V by the FG strap on the main PCBA. (See Fig. 10-1)

(2) If it is required to separate the FDD frame from DC 0V, remove the FG strap. However, the FDD frame must be electrically connected to DC 0V by some other method when the FDD is tested alone.

(3) If it is required to connect the FDD frame to the host side by other cabling method, M2.6 tapped hole at the rear side of the FDD can be used. (See Fig. 3-1).
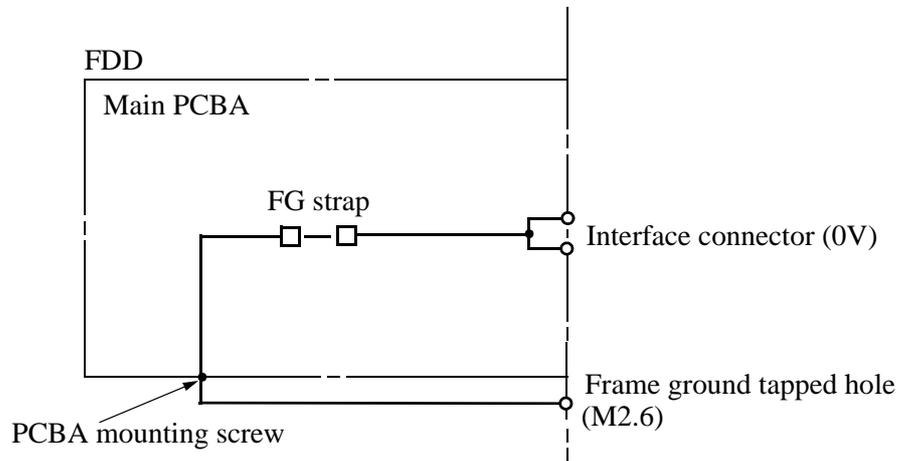

(Fig. 10-1) Frame ground internal connection

11. CUSTOMER SELECTABLE STRAPS

11.1 Function Summary of Straps

The FDD is equipped with the following selectable straps on the main PCBA. Insertion of a short bar onto the post pin is defined as the on-state of the strap. Refer to Table 1-1 in item. 1. as to the strap setting at delivery and selectable straps.

Strap post layout
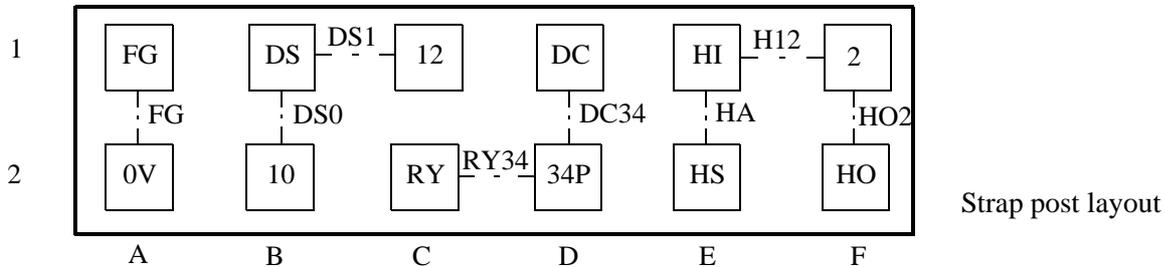

(Table 11.1-1) Function summary straps

Strap	Function
DS0	DRIVE SELECT 0 input on pin 10
DS1	DRIVE SELECT 1 input on pin 12
*RY34	READY output on pin 34
*DC34	DISK CHANGE output on pin 34
*HA	Density set automatically
FG	Short between FDD frame and DC 0V

Notes : *straps overlap with other strap posts. Insert a short bar according to your priority.

11.2 DS0/DS1

(1) In the multiplex control, these straps designate the address of the FDD.
(2) By the combination with the DRIVE SELECT 0 ~ 1 signals, two addresses, Max. can be designated. Refer to Fig. 8.2.2-1 and Table 11.1-1.

11.3 HA Strap

The HA strap is one for automatically setting the FDD to the 1MB mode or high density mode (1.6MB mode or 2MB mode) according to the type of a disk installed.
This should be always set to ON for using the FDD in the 2MB/1.6MB/1MB modes.

11.4 RY34/DC34 Straps

(1) RY34 strap is used to output the READY signal on interface pin No.34.
(2) DC34 strap are used to output the DISK CHANGE signal on interface pin No.34, 2.
(3) Refer to Table 11.1-1 as to selection of signal pin number and overlapping with the other strap functions.

12. TURN ON CONDITION OF INDICATOR AND SPINDLE MOTOR

12.1 Front Bezel Indicator

Two types of indicator (LED) turn-on condition are offered for selection using the IR strap.

However, the indicator keeps off until 3.1ms has passed after the DRIVE SELECTion to avoid the polling operation of the DRIVE SELECT signal.

12.2 Spindle Motor

The spindle motor rotates while the MOTOR ON signal is TRUE. However, the spindle motor does not rotate at any condition while no disk is installed.
